

***Oxystomatina greenpatchi* n. sp.**

Fig. 18 a, b

Locality and material. — Falkland Islands, Port Louis, Greenpatch, St. 42a: 1♀

Dimensions: L = 2,750 mm., $a = 55,0$, $\beta = 3,67$, $\gamma = 22,9$

Body slender, about evenly thick, only rather strongly thinned in the oesophageal region. Head truncate. (Cephalic bristles could not be stated.) Lateral organs situated rather far posteriorly, 34μ behind the front end, inconspicuous. A number of oval, granulated bodies in the oesophageal region. Oesophagus elongated, posteriorly thickened, at the end with 3 rounded bodies, similar to those of the genus *Trilobus* BASTIAN. Tail short, slender, tapering gradually in the 2 anterior thirds; in the posterior third more strongly thinned than in *O. elongatum*, at the end weakly swollen and rounded.

St. 42a. Falkland Islands. Port Louis: Greenpatch. Material shaken up from algae and kelp-rhizoids, cast up on shore by storm. 30. 7. 1902.

Number of species found: 54; Number of specimens found: 150.
