

PONTONEMA LEIDYI Mawson.

Pontonema leidy Mawson 1956, Enderby Land, MacRobertson Land.

Macquarie Island : Coll. L, N.

♂ (2x) : L = 8.6, 11.6 mm. ; α = 66, 61 ; β = 6.6, 7.1 ; γ = 71, 97.

j (1x) : L = 8.5 mm. ; α = 65 ; β = 7.1 ; γ = 71.

These specimens are similar to those described for the species from Antarctic stations. The species occurred among large numbers of *P. cobbi* but is distinguished by the shape of the tail and the curling habit of the body, as well as, on closer scrutiny, by the more forward position of the dorsal tooth.
